NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      as soon as it
be preserved.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence restriction more than one subclone; and the assembly was confirmed by digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. MO. For additional information about the map position of this MO. For additional information about the map sequence, see http://genome.wustl.edu/gsc John L St. n D. et. Louis

SOURCE INFORMATION:

donor, as described by Osoegáwa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of becerial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute The RPCI-11 human BAC library was made from the blood of one male (http://bacpac.med.buffalo.edu)

pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-1077K22; the clone sequenced to the right is RP11-64705. Actual start of this sequences position 1 of RP11-459I19; actual end is at base position 206854 of RP11-459I19. clone

Data from AC079810 and AC073128 was used to finish this clone, AC009974. Polymorphisms have been identified between AC073128 AC009974. A single plasmid region exists between 38812-38903. unresolved tandem in the HERV SVA exists between 184390-185163. PCR suggests that approximately 1700 bps are missing. Location/Qualifiers ş

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R71A of a three may also be variation in thron 6. The numbering of these variations is based on the full length cDNA as given, rather than on position 1 of the open reading frame.

Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle pRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are

                                                                                                                                                                                                                                                                                                                                                useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3. Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or

     The present sequence is a cDNA encoding pig adenosine monophosphate (AMP) -activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3. Prkag3 gene is located in the RN locus of chromosome 15. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence activity, and for restoring a normal AMPK function. PRKAG3 sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    a genetic polymorphic marker linked to a sequence encoding PRRAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRRAG3. Transgenic animal and host cell transformed with PRRAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRRAG3 is useful for detecting mutations in a PrkaG3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.
New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment

complete PRKAG3. Prkag3 yene is located in the RN locus of chromosome

15. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as cidabetes, obesity, and disorders associated with muscle metabolism contents such as suppathy and cardiovascular diseases, to modulate AMPK cardiovascular diseases, to modulate metabolism sequence and its functionally altered metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are useful for detecting a dysfunctionally altered allele of PRKAG3, are useful for detecting and host cell transformed with PRKAG3 or a preferable candinal and host cell transformed with PRKAG3 or useful for screening compounds able to modulate AMPK activity. Nucleic actidence encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.
   Sequence 1873 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a cDNA encoding pig adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                myopathy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC diabetes, obesity, and disorders associated with muscle metabolism CC such as myopathy and cardiovascular diseases, to modulate AMPK CC activity, and for restoring a normal AMPK function. PRKAG3 sequence CC and its functionally altered mutants are useful for the diagnostic CC evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect CC a genetic polymorphic marker linked to a sequence encoding PRKAG3. are CC useful for detecting a dysfunction of carbohydrate metabolism resulting CC from the expression of a functionally altered allele of PRKAG3. are CC transgenic animal and host cell transformed with PRKAG3 or a CC neterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for CC screening compounds able to modulate AMPK activity. Nucleic acid CC encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or CC in a sequence encoding the first cystathione beta synthase (CBS) domain CC of PRKAG3 and is useful in gene therapy.

                                                                                                                                                          is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. There may also be nucleotide variation in intron 6.
                                                                                                                                                                                                                                                          The sequences given in AAH43681-84 represents genomic encoding the human AMP-activated protein kinase gamma (PRKAG3). Detecting the presence of the PRKAG3 DNA, or

                                                                                                                                                                                                                                   CC AAZ32000 and AAZ32001 encode, and AAY49501 and AAY49502 represent, human CC metalloprotease thrombospondin (MEPH) proteins METH1 and METH2 CC respectively. METH1 and METH2 have been found to be potent inhibitors of CC anglogenesis both in vitro and in vivo. They can be used for treating CC cancer and other disorders related to angiogenesis including abnormal CC wound healing, inflammation, rheumatoid arthritis, psoriasis, CC endometrial bleeding disorders, diabetic retinopathy, some forms of CC macula degeneration, haemangiomas, and arterial-venous malformations. CC They may be useful in treating deficiencies or disorders of the immune CC system, by activating or inhibiting the proliferation, differentiation, CC or mobilisation (Chemotaxis) of immune cells. The etiology of these CC immune deficiencies or disorders may be genetic, somatic, such as CC cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or CC conditions, both chronic and acute conditions. The products can also be used to treat inflammatory CC used for detection and diagnosis. AAZ32002 to AAZ32080, and AAZ49501 to AAZ49501 to represent sequences given in the exemplification of the present CC invention.

The present invention relates to human METH1 and METH2, (ME for metalloprotease and TH for thrombospondin; see AAB50002 and AAB50003). The present sequence is an expressed sequence tag (EST) for METH. METH can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease, rheumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonunion fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, Osler-Webber syndrome, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, fibromuscular dysplasia, wound granulation, Crohn's disease or atherosclerosis. METH can also be used in birth control. METH can also be used in birth control. METH can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-JUL-1999;
